## **ISO/IEC JTC1 SC32/WG1 Scope**

**Title:** Open-edi

**Scope:**

Standardization in the field of generic information technology standards for open electronic data interchange needed to attain global interoperability among the information technology systems used by organizations. Such interoperability is viewed from both business and information technology perspectives.

Within this context the scope includes:

- methodology and framework for identification and modelling of business activities through business scenarios and their components, such as roles, information bundles, and semantic components;
- identification and specification of formal description techniques for describing classes of business requirements and their contextual and semantic specifications;
- identification and specification of formal description techniques for developing business scenarios and their components;
- identification and specification of information technology services and service interfaces for accomplishing business transactions;
- identification and specification of facilities to manage business scenarios and their components.

Note: Priority is on work required to support the needs of electronic commerce, electronic administration, electronic business, etc. The basis of work is the Open-edi Reference Model (ISO/IEC 14662).
